Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/587,835

Applicant(s)

HOCHMAN, JACOB

Examiner

ANNE L. HOLLERAN

Art Unit

1643

Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 21 April 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 40-65 is/are pending in the application.
- 4a) Of the above claim(s) 45, 46 and 51-65 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 40-44 and 47-50 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SI/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, claims 40-44 and 47-50, in the reply filed on 4/21/2009 is acknowledged.

Claims 40-65 are pending.

Claims 45, 46, and 51-65, drawn to non-elected inventions, are withdrawn from consideration.

Claims 40-44 and 47-50 are examined on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 40-44 and 47-50 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 40 and 47 refer to "high level of expression" or "high degree of binding", which are phrases that are unclear because the terms "high level" or "high degree" appear to be relative to a standard. However, the specification provides a description of "high level of expression", where the description includes a method of preparing a standard by determining the level of expression of p14 peptide present in a sample obtained from a plurality of patient positively

diagnosed as having breast cancer (see page 6, line 16). Because the claimed methods have the purpose of diagnosing breast cancer, it is not clear how samples from breast cancer patients may be used as standards, and it is not clear in light of the specification what is meant by “high level of expression” or “high degree of binding”.

Claims 42 and 48 are indefinite because of the term “suspicious area in the breast”. This term appears to be a subjective definition for an area of the breast, and is open to many interpretations. Therefore, the scope of the claims is not clear.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 40-43 and 47-49 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pogo (US 6,040,146; issued Mar. 21, 2000) in view of Hoch-Marchaim (Hoch-Marchaim, H.,

Virology, 313: 22-32, 2003; of record), and further in view of Melana-I (Melana, S.M., et al. Clinical Cancer Research, 7: 283-284, 2001).

Pogo teaches a method of detecting breast cancer by the method of detecting peptides encoded the MMTV env gene, and fragments thereof (column 6, line 63 – column 7, line 53). Pogo fails to teach the specific fragment of p14, which is the lead peptide of MMTV Env precursor protein. Pogo fails to characterize the breast tissue as fresh biopsy section, cryo-section or paraffin embedded section.

Hoch-Marchaim teaches that p14 is the leader peptide of MMTV Env precursor protein, and that it is present in T cell lymphomas (see abstract; see page 30).

Melana-I teaches that paraffin embedded section of breast tissue from breast cancer or normal breasts may be used in the detection of MMTV-like env sequences (see page 283).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the teachings of Pogo with those of Hoch-Marchaim and Melana-I to make the claimed method of diagnosing breast cancer in a subject of or screening samples. One would have been motivated to use the methods and antibodies of Hoch-Marchaim because Hoch-Marchaim demonstrates p14 is a common protein in MMTV-derived T cell lymphomas. One would have had a reasonable expectation of success in combining the teachings of the cited references to arrive at the claimed methods because MMTV is associated with breast cancer, as taught by Pogo.

Claims 40-42, 44, 47, 48 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pogo (US 6,040,146; issued Mar. 21, 2000) in view of Hoch-Marchaim

(Hoch-Marchaim, H., Virology, 313: 22-32, 2003; of record), and further in view of Melana-II (Melana, S.M. et al. Medicina (B Aires), 62(4): 323-327, 2002; abstract only).

Pogo teaches a method of detecting breast cancer by the method of detecting peptides encoded the MMTV env gene, and fragments thereof (column 6, line 63 – column 7, line 53). Pogo fails to teach the specific fragment of p14, which is the lead peptide of MMTV Env precursor protein. Pogo fails to teach further detecting MMTV env sequences in a blood sample from a breast cancer patient.

Hoch-Marchaim teaches that p14 is the leader peptide of MMTV Env precursor protein, and that it is present in T cell lymphomas (see abstract; see page 30).

Melana-II teaches that in the peripheral blood mononuclear cells of breast cancer patients, MMTV expression is detectable (see abstract).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have combined the teachings of Pogo with those of Hoch-Marchaim and Melana-II to make the claimed method of diagnosing breast cancer in a subject of or screening samples. One would have been motivated to use the methods and antibodies of Hoch-Marchaim because Hoch-Marchaim demonstrates p14 is a common protein in MMTV-derived T cell lymphomas. One would have had a reasonable expectation of success in combining the teachings of the cited references to arrive at the claimed methods because MMTV is associated with breast cancer, as taught by Pogo.

Conclusion

No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne Holleran, whose telephone number is (571) 272-0833. The examiner can normally be reached on Monday through Friday from 9:30 am to 5:00 pm. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Larry Helms, can be reached on (571) 272-0832. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (571) 272-1600.

Papers related to this application may be submitted to Group 1600 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Official Fax number for Group 1600 is (571) 273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).
